Connecting to G Drive on Mac OS X 10.6 or later

1. With Finder open, click Go and select Connect to Server...

2. Enter `afp://plcvfs01/` and then click + button to add to favourites. Click Connect
3. Enter your username and password and click **Connect**

![Image of login screen](image1.png)

4. You should now see G Drive connected on the desktop

![Image of desktop](image2.png)

This completes the process of setting up your computer to access G Drive (Data/Common/Student).

*(Note: If you cannot find ‘Data’ drive on your desktop, see steps 5 and 6 on next page)*
If G Drive (Data) is not displaying on the Desktop, follow these steps

5. With Finder Open, click Finder and select Preferences...

![Finder Preferences](image)

6. Check the option, Connected servers

![Connected servers](image)

Any connected drives will now show up on your Desktop
